

Will Nebreda

@willnebreda_producer · 5,195 followers · Producer and mix engineer — rock, folk, singer-songwriter

You take self-recorded rock, folk and singer-songwriter tracks and turn them into records that sound like records, without the artist losing their nerve or their vision on the way.

ESTIMATE · CONSERVATIVE CASE

\$19,500

One cohort launch. Thirteen of the 260 people who already engage with your posts taking a \$1,500 spot in an eight-week incubator, run once in spring or summer 2027.

Before then: \$707 estimated from a \$29 release guide and a \$197 pre-recorded workshop — both built from posts you have already made, neither needing a diary commitment.

INSIDE THIS AUDIT

- What your numbers say
- Where the number comes from — the full arithmetic
- The product ladder: three rungs, three price points
- Offer detail for each, with the first step to build it
- A launch plan that fits your timing, not a generic one
- The first post, ready to publish this week

READ THIS FIRST

Every projection here is an estimate. The assumption behind each one is printed next to it, and the working is shown on pages three and four so you can argue with it. Figures are in US dollars, as priced in the audit. Nothing here assumes you gain a single new follower.

SECTION ONE

What your numbers say

5,195

FOLLOWERS

88

AVG LIKES

1.75%

ENGAGEMENT RATE

1,761

AVG VIEWS, LAST 10

VIDEOS

Engagement of 1.75% on 5,195 followers is healthy for an account that teaches a craft rather than chases trends. The more useful number is reach: your last ten videos averaged 1,761 views, with the two strongest at 3,298 and 3,683. You are consistently seen by more people than follow you, and the posts doing that work are the teaching posts — which is exactly the audience a paid offer draws from.

Your three pillars

PILLAR	THE POST THAT PROVES IT	SIGNAL
1. Tactical mixing principles and workflow Rule-based systems that stop artists second-guessing	The seven mixing rules — draft in one day, ditch the ego, stop mixing in solo	274 likes 7,119 views High demand
2. Release strategy and pre-release assets Not just a good mix — a release that does not flop	The seven things to have sorted before your next release	238 likes 8 comments High demand
3. Vocal processing and signal chains Forward, wide, polished lead vocals	The Florence vocal breakdown and the rock vocal chain	126 / 76 likes Medium demand

WHAT YOU ARE ACTUALLY SELLING

Self-recording artists stuck in endless revisions, creative burnout and amateur demo sound, moved to radio-ready, streaming-grade records that connect with listeners and build a real fanbase. Your bio already writes the offer: stress-free mixing that reflects the artist's vision. Everything that follows is that sentence, priced.

Follower, like, comment, view and engagement figures are public profile data. Post reach figures for the two headline posts are as recorded in the audit.

SECTION TWO

Where the number comes from

Four inputs, one multiplication. If you disagree with an input, change it and the answer moves — that is the point of showing it.

INPUT	VALUE	SOURCE
Follower base	5,195	Public profile data
Engaged audience (5% of followers)	260	Conservative market premise used in the audit
Cohort price	\$1,500	Audit — premium, limited-spots offer
Spots offered	13 – 20	Deliberately limited so you can still mix

ESTIMATE · CONSERVATIVE

$$13 \text{ spots} \times \$1,500 = \$19,500$$

Thirteen buyers is 5% of your engaged 260, and 0.25% of your following. The post that landed 274 likes needed to move thirteen of those people.

ESTIMATE · CEILING

$$20 \text{ spots} \times \$1,500 = \$30,000$$

The upper end only. It assumes every limited spot sells, which is a good launch rather than a normal one — so it is not the number on the cover.

The assumption I would watch

Five per cent of an engaged audience converting at \$1,500 is ambitious for a first premium offer. If it lands at 2% instead, that is 5 spots and **\$7,500** — still, by a distance, the largest line in this document, and still worth eight weeks of your calendar. Plan the cohort so it is viable at five artists and profitable at thirteen.

All figures on this page are estimates based on public profile data and the audit. Continued on the next page: the two lighter rungs and the twelve-month picture.

SECTION TWO, CONTINUED

The lighter rungs, costed

You do not want to run a cohort until spring or summer. These two are built from posts you have already made, sell without a single live commitment, and give the spring launch a list of people who have already paid you once.

PRODUCT	PRICE	CONVERTS (OF 260)	BUYERS	REVENUE
Release-Ready Checklist (guide)	\$29	1.5 – 3%	4 – 8	\$116 – \$232
Stress-Free Mixing Architecture (recorded)	\$197	1 – 2%	3 – 5	\$591 – \$985
Production Incubator (cohort)	\$1,500	5 – 7.7%	13 – 20	\$19,500 – \$30,000

Lower conversion at higher prices. Each figure is one promotion push or one launch to the same engaged 260 – no audience growth assumed, and no double-counting: someone who buys the guide and later a spot is counted in both lines because both sales happen.

The twelve months, end to end

WHEN	WHAT SELLS	LOW	HIGH
Oct – Nov 2026	Guide, one push	\$116	\$232
Dec – Feb	Recorded workshop, one launch	\$591	\$985
Spring / summer 2027	Incubator, one launch	\$19,500	\$30,000
Total	Estimate	\$20,207	\$31,217

Not counted: a second guide push (a further \$116 – \$232), evergreen workshop sales between launches, and any client mixing work the guide sends your way. Those are upside, deliberately left out of the total.

SECTION THREE

The product ladder

Three rungs, one per pillar. Each one answers something your audience has already told you it wants by liking, commenting and watching.

RUNG	PRICE	BUILD IT	WHO IT IS FOR	ESTIMATED REVENUE
1. The Release-Ready Checklist Guide, from pillar two	\$29	Oct – Nov 2026	Artists about to release who do not know what needs to be ready, or when	\$116 – \$232 per push
2. Stress-Free Mixing Architecture Pre-recorded workshop, from pillar one	\$197	Dec – Feb	Self-producers losing weeks on a single balance inside the DAW	\$591 – \$985 per launch
3. Release-Ready Production Incubator Eight-week small-group mentorship	\$1,500	Spring / summer 2027	Artists with recorded tracks, stuck in mix paralysis, scared of releasing something flat	\$19,500 – \$30,000 per launch

Why in this order

The guide and the workshop are not the money – rung three is. Their job is to turn followers into buyers while you carry on mixing, so that when you open the incubator in spring you are selling a \$1,500 programme to people who have already paid you \$29 or \$197 and liked what arrived. That is a far shorter conversation than selling a cohort cold.

It also protects the number on the cover. Every guide buyer tells you, in their reply and their release date, whether the cohort should run in April or July, and whether \$1,500 is the right figure for this audience before you commit eight weeks of evenings to it.

A FOURTH RUNG, FOR LATER

Vocal Finish Masterclass & Stem Audit — artists send raw vocal stems for signal chain analysis, dynamic control fixes and custom spatial preset setups. Pillar three proves the appetite. Price it after the first cohort has told you what an hour on their vocal is worth. Not counted in any figure in this document.

OFFER DETAIL · RUNG THREE

Release-Ready Production Incubator

\$1,500 · eight weeks · 13 – 20 spots · spring or summer 2027

What is inside

- Eight weeks, small group, applications only
- Weekly live mix reviews — their track, on your speakers, in front of the group
- Track diagnostics: what is wrong, why, and the order to fix it in
- Direct feedback on their actual sessions between calls
- Release strategy guidance, so the finished record lands on launch day

Who it is for

Independent rock, folk and singer-songwriter artists who have recorded tracks at home and are stuck in mix paralysis — months of tweaking, objectivity gone, terrified of releasing something flat that cannot compete on streaming.

The promise: you arrive with an unreleased track and leave in eight weeks with a release-ready mix and a plan for putting it out — with me listening to your work every single week, so you are never guessing on your own.

Why it sells

It solves the exact frustration your top content exposes. Artists spend months obsessing over mixes, lose objectivity, and still release music that cannot compete. Direct access and live feedback replace that with certainty — and certainty is what \$1,500 buys.

The first step to build it

The eight weeks already exist across your feed. Write the week-by-week from what you have posted: the seven rules as weeks one and two, top-down workflow and the ego problem in three and four, vocals in five and six, the release checklist in seven and eight. Then fix the dates now, name them at the end of the guide and the workshop, and open applications in spring.

Estimate: 13 spots × \$1,500 = \$19,500 conservative; 20 × \$1,500 = \$30,000 at the ceiling. Viable at five.

OFFER DETAIL · RUNG TWO

Stress-Free Mixing Architecture

\$197 · pre-recorded implementation workshop · build it Dec – Feb

This is the audit's workshop, recorded rather than run live — so it earns while you are in the studio and needs nothing from your diary. It is strictly about speed and workflow discipline inside the DAW.

What to include

- Your session template, ready to download and open
- The top-down chain order you actually work in
- The seven rules turned into a working checklist, not a reel
- A decision tree for the only question that matters: is this mix finished or am I fiddling
- Two walkthroughs of real sessions, start to rough mix

Who it is for

Self-producing artists who waste weeks on a single balance, mix in solo, and lose the emotion of the song somewhere around hour forty.

The promise

A competitive rough mix inside twenty-four hours, using a fixed order of decisions instead of instinct at 2am.

The first step to build it

Record it across one weekend in three sittings, screen capture over your own session. Do not write new material — the content is already in the posts that earned 274 and 76 likes. Export the template, write a one-page sales note, and sell it first to everyone who bought the guide, then to the feed.

ESTIMATE

$260 \text{ engaged} \times 1 - 2\% = 3 - 5 \text{ buyers} \times \$197 = \$591 - \985

One launch to your existing engaged audience. A lower conversion than the \$29 guide because the price is higher. Evergreen sales after launch are not counted.

Last page of the workshop: the incubator dates, and an invitation to apply.

OFFER DETAIL · RUNG ONE

The Release-Ready Checklist

\$29 · guide · build it in October, sell it in November

Your highest-reaching post asked artists whether they had seven things sorted for their next release. It took 238 likes and 8 comments — more comments than anything else you posted. People were not admiring it, they were checking themselves against it. That is a product.

What to include

- The seven items from your own post, a page each, in the order they need doing
- A deadline for every item, counted back from release day
- What to send a mix engineer, and in what format, so nothing bounces back
- The hand-off to mastering, written for someone doing it for the first time
- A one-page timeline they can print and stick to the wall

The promise

No release that falls over because something was not ready. Twelve to twenty pages, read in an evening, used for every single they put out after that.

Who it is for

Independent artists with a finished song and no idea what has to happen in the six weeks before it goes live.

ESTIMATE

$260 \text{ engaged} \times 1.5 - 3\% = 4 - 8 \text{ buyers} \times \$29 = \text{\$116} - \text{\$232}$

Per promotion push. This rung is not about the revenue — it is the cheapest way to find out which of your followers will actually pay you, and to have their email before spring.

The first step to build it

Open the caption of that post, expand each of the seven lines into a page, and write the deadline column last. Put the workshop on the closing page and the incubator dates underneath it. One week of evenings, and it is done.

SECTION FIVE

Launch plan

WHEN	WHAT YOU DO	RUNG
This week	Post the validation carousel on the next page. Count the replies, DM every one of them	None — data only
Weeks 2 – 6	Write the checklist. Sell it to everyone who replied, then to the feed, with a story series on the seven items	Guide, \$29
Dec – Feb	Record the workshop over a weekend. Launch to guide buyers first, feed second. Name the incubator dates at the end	Workshop, \$197
Spring 2027	Run the six-phase launch below to a list that has already bought from you twice	Incubator, \$1,500

The six phases for the cohort launch

- **1. Build up.** Stories, polls and question boxes on the pain points — forty hours on a vocal, mixing in solo, the release that went nowhere. Interaction is the whole goal.
- **2. Invitation.** Announce something is coming and invite people into a private WhatsApp or Telegram group where the details land first. Tease a time-limited bonus.
- **3. Anticipation.** Inside the group: what is coming, what artists will walk out with, and a timeline that is crystal clear so nobody misses the opening.
- **4. Reveal.** The full breakdown — what is included, the bonus, the price, the open and close dates. No ambiguity left anywhere.
- **5. Conversion.** Send the application link for the limited spots, run a poll for who is in and who has questions, then follow up one-to-one in the DMs. Most of the thirteen close here.
- **6. Urgency.** Countdowns at 24h, 12h, 6h, 2h and closed, each one naming what staying out costs them. The close must be real — reopening it destroys the next launch.

Phases as set out in the audit, sequenced around your spring or summer timing.

SECTION SIX

The first post

Before you build anything, test the demand. Three slides, black background, white text — the format that already works for you. Post it this week.

SLIDE ONE · THE HOOK

You have spent forty hours tweaking that one vocal track. And deep down, you know it still does not sound like a real record.

SLIDE TWO · THE AGITATION

It is not your gear and it is not a missing plugin. You are tweaking in solo, second-guessing every EQ move, and quietly killing the emotion of the song. More hours inside your DAW will not fix a broken mix workflow.

SLIDE THREE · THE CALL

Next year I am putting together a small, private group of fifteen artists — we take your unreleased tracks and turn them into release-ready, streaming-grade records, with my direct guidance every week. If that is you, reply I WANT and I will tell you first.

Caption

Being an artist myself, I know what it costs to hand your music over. This is the opposite of that — you stay in the room the whole way. Reply I WANT if you want the details before anyone else.

What to do with the replies

Replies are not sales. Treat the count as a read on interest and DM every single person: what are you working on, when do you want it out, what is the bit you are stuck on. Those conversations tell you the price, the dates and the wording of the offer months before you commit to it — and they are the first names on the list you sell the guide to in November.

CLOSING

What to do next

- **Post the carousel this week** and reply to everyone who answers. Cost: one evening.
- **Write the checklist from your own release post.** It is the cheapest way to turn 5,195 followers into your first buyers.
- **Block a weekend in December** for the workshop recording. Nothing about it needs to be live.
- **Put the incubator dates in the diary now** – spring or summer 2027 – and name them at the end of both lighter products so the audience is expecting it.

NEXT STEP

Reply to this DM and I'll walk you through the numbers and what to build first.

Prepared by Euan Grant · Autora AI Automation ·
September 2026

All revenue figures in this document are estimates based on your public profile data and the audit. They assume no audience growth, and every assumption behind them is printed beside the number on pages three and four.

How this was made

I build automations for a living, and I used AI to do the analysis here – pulling the public data, reading across your 125 posts, finding which themes actually move and modelling the numbers. That is why this took an evening rather than a fortnight. The judgement calls, the pricing and the words are mine.
